DETAILED ACTION

1. Applicant's amendment filed 3/26/03 in Paper No. 9 is acknowledged and entered.
2. Claims 1-22 are pending.

Election/Restrictions

3. Applicant's election of Group II (Claims 7-21) in Paper No. 9 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

4. Claims 1-6 and 22 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected inventions, there being no allowable generic or linking claim.

Election was made **without** traverse in Paper No. 9.

5. However, upon reconsideration of the elected inventions and in order to further the prosecution of the application, applicant is requested to elect, *for purposes of search*, the following species.

'The presently claimed invention recites a process for producing a genomic DNA library. The method comprise of 1) subjecting a genomic DNA to DNA fragmentation means and 2) subjecting the mixture of fragmented DNAs obtained in step (1) to nucleic amplification.'

Art Unit: 1639

The presently claimed method disclosed a plurality of patentably distinct species.

Applicants are required to further elect ***a single*** species from each of the following groups:

- a) Genomic DNA sequence.
- b) DNA fragmentation means.
- c) The ligase in regard to claim 13.
- d) The sequence of the amplification primer.
- e) The DNA polymerase.
- f) The sequence of the adapter DNA in regard to claim 16:
- g) The sequence for restriction endonucleases in regard to claim 16.
- h) The linker sequence in regard to claim 16.
- i) The promoter sequence for RNA polymerase in regard to claim 16.

The species are distinct, each from the other, because their structures and/or modes of action are different. For the different methods, the steps are different, requiring different reagents and/or producing different products/results.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and ***a listing of all claims readable*** thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Art Unit: 1639

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

6. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
